

How to Access iReady via the iPads

Students and teachers can access iReady on their iPad. Please share with all, post it in Teams and on your website!

- Click on the CLEVER App and sign-in using your district credentials, once inside the CLEVER App click on your i-Ready tile. Students will be prompted to open i-Ready and select Reading or Math.
- Students can also access i-Ready through the Safari Browser (Not Chrome) and login to their portal, under Apps & Services, click on the i-Ready tile. Students will be prompted to open i-Ready and select Reading or Math.

Here's a short video to help students. <https://shorts.flipgrid.com/watch/8916504344526953>

Jesus Vigo from IT has pushed out the Clever App and i-Ready App on the teachers iPads, so teachers can become familiar how students access i-Ready.

Additionally, teachers can also access their reports as well through Clever App and by clicking on i-Ready tile.

Students will not see the i-Ready App on their iPad, as we have placed the App in a folder, but when in use it will appear. Teachers will see it, we did not hide it, but you must access through the CLEVER App.

Again, students and teachers will access i-Ready through the CLEVER App or the portal using Safari, either way it will bring one back to the hidden i-Ready App that is running in the background.

If a student or teacher experience an issue with an App not responding they can be reinstalled through the Self Service App on the iPad. Please refer to the students orientation regarding Self Service App.

If you would like a one pager, in addition to the video I can create one. Just let me know.

You can even practice with your teachers and students if you like using their current device... take one to CLEVER.com; login and click on the i-Ready tile.
